Thread: [Is Dyncheck broken / outdated?](#)

zxPhantomBlade - August 10, 2021, 4:18 am

Alright so I was working on a private crypt and this is the scan result

<https://dyncheck.com/scan/id/7e0f762e81f8861954f9b1c1eab2ab64>.

However when I try to run the file defender still flags it. I have no clue whats wrong. Is dyncheck outdated?

n0b0dy777 - August 10, 2021, 4:31 am

try <https://avcheck.net> and post scan result link here

AVcheck is scantime and clean. <https://avcheck.net/id/noRvBXhe6INV>

n0b0dy777 - August 10, 2021, 4:37 am

try (static av check) in dyncncheck and post result here

Still gets flagged

Frost Crypt - August 10, 2021, 5:49 am

because on dyncheck it won't check with cloud detection, just normal signature detection and defender is known to be a retard and flag new files even if they pose no threat, especially after doing many tests which seems to be putting it in some sort of paranoid mode.

Same file can be clean and detected at the same time if you test them on different computers.

Your Dyncheck settings have internet settings set to blocked meaning it wont connect to the WD cloud.

To answer your question, no dyncheck isn't broken. The settings you chose match up with the results.

Make a VM run the file with internet off you should get same results as dyn.

Eladictococy - *August 17, 2021, 3:50 am*

Nopes! dyncheck isn't broken/outdated.
