Thread: [ask insert code php to jpg](#)

vira - August 11, 2021, 3:16 pm

Hi

sorry can i have questions ?

i want insert my code php shell < ?....?> to one file picture like : .jpg , .gif or somethings like that ?

can you suggest me some method ? ,

i have try with exiftool ,its worked only with <? phpinfo();?> but other code its not work , show error

i test my code shell , always not work :(

please help me ,thank you so much

Money - August 11, 2021, 4:47 pm

I just found this the other day. But this for jpeg instead of jpg or gif etc. If the site allows jpeg then go ahead.

https://github.com/dlegs/php-jpeg-injector?fbclid=IwAR0aMVwbOXP-NIFEcFeo6p19GW5bb0InHTjeYXnhDyTrNa_fkQ_9TsgFGhQ

Let me know if it works , I haven't test the tool myself.

thank for your share so much , but i dont know why i test this tool always not working , its always show somethings like:

The filename, directory name, or volume label syntax is incorrect.

this is picture , what its show , i hope some peoples can help you and me to fixed this one

C:\python\shell\CanYouSeeMe.jpg

Hello DISQUAL

thank you so much for your try

but i dont know why its still not work :(

Charger - August 12, 2021, 5:40 pm

Windows arguments are separated by a space. Any value that contains a space needs to be

surrounded by quotation marks to make it a literal.

daxiqehk_daxiqehk - August 12, 2021, 9:35 pm

copy all into python folder then do python gd.py.....

What platform are you trying this on? It could be that system function is blocked and phpinfo is not because of it's nature.
