Thread: [Looking for experienced Reverse Engineer. Unity/JavaScript web-based game](#)

Frukt - August 25, 2021, 5:30 am

Hello Hackforums,

I'm searching for a partner with the skills to reverse engineer an online web-based game built on Unity using JavaScript to run it.

Our partnership will involve my information and money while you use the skills to manipulate the game in certain ways. The partnership can be discussed if you'd prefer another solution.

I will not be posting the website in question but I will explain it briefly.

I want to be able to complete the game without actually completing it. You get a small reward after the completion of the game and I am looking for ways to manipulate the game.

It could be manipulating the tasks in the game, redirecting you to the end, Godmode etc.

I'll leave the more technical sides below that I got from a friend:

It's a web gl project

DOMAIN.COM/Build1.loader.js

The JavaScript code that the web page needs in order to load the Unity content.

DOMAIN.COM/Build1.framework.js

JavaScript runtime and plugins.

DOMAIN.COM/Build1.wasm

WebAssembly binary.

DOMAIN.COM/Build1.data

Asset data and Scenes

If you can complete this OR knows someone who can complete it, please PM me or add me on Discord
