Thread: [Send Encrypt a Message PGP , help](#)

500 - August 28, 2021, 4:34 am

Guys i have tried many times to encrypt a message PGP but all of the trying came back with failed ! i do not know how can i send encrypt a message with the correct way. Please help me to find my needs

ProtonMail supports this, you can select to sign the message to get started.

Protonmail will give out your data to law enforcement though, even when there isn't a good reason to do so. I also use them for some email accounts, but I would not trust them with data that is sensitive enough to require PGP encryption.

Don't use email for sensitive data. As of making accounts and school/work obligations use tutanota and guerilla/temp mail.

Yes, tutanota is considered to be somewhat secure. Also riseup, however you'll need an invite for that.

My question is about encrypted message pgp in dark web for one vendor, the message should be like that to post it

--- BEGIN PGP MESSAGE ---

bla bla bla

---END PGP MESSAGE---

So what is the better way to do it ?
