Thread: [Where to safely get programs \(Keyloggers, RATs\)](#)

s0sorry - September 5, 2021, 4:59 am

Hi,

I started to look around on various forums and wanted to learn how to hack, I'm not a programming genius which is why I firstly start to rely on Keyloggers like Syslogger and RATs like Dark Comet. Though those are pretty popular tools I'm not sure about where to download them since there are a vast majority of shady websites and / or users which offer them.

Anyone there to give me a good tip / source?

Thank you in advance.

PS: I want to 'learn how to hack' to look into the depths of the internet and technology since I was interested in internet-related topics for my whole life not never fully understood every aspect, which is what I crave.

I mean there isn't a site that is 100% Virus safe, There might be a couple of sites (or forums) that have free cheats that are actually clean, but there is always a risk of getting malware (or possibly even ransomware if you aren't lucky enough) in one of the cheats on those sites.
