Thread: [What can someone who knows advanced c programming language do?](#)

mermi45 - September 6, 2021, 9:17 am

Hi guys, I'm new to the software world. I will study C programming language for 3 hours every day for 6 months. During this time, I can learn 80 percent, 90 percent vs what percent level.

And what can a person who knows 100 percent of this programming language do?

Beladonis - September 6, 2021, 9:28 am

Focus on what you learn rather than how much you can possibly learn...

Commands algorithms and logic

You could give some systems programming a go, i.e. implement your own data structure and algorithms that operate on them. You will also find that it's not necessarily all about knowing everything you can do with a language down to the most obscure techniques but how you can use the techniques you know and understand to build a system well.
