Thoughts? coinmarketcap.com/currencies/oasis-network/

Next link tbhtbh

Tando - September 6, 2021, 10:32 pm

Hold up hold up hold up... Tokenized data? Genius.

Might chip in.. I smell a 1000x here. :pirate:

SUI-3183372 - September 6, 2021, 10:53 pm

I know the Oasis Network is used with success to secure medical data in a few different instances. I've considered buying some before, but I'm not entirely sure what would drive its value in the long run.

Cooldudex - September 6, 2021, 11:17 pm

I was close to buying it a few times earlier before this pump but I never did. I don't think I'll be hopping in at this price. Could keep going, though. Oh well. Good luck!

darkair - September 6, 2021, 11:17 pm

it went parabolic, would suggest waiting for a dip or DCA the entry wouldn't ape in

Tando - September 7, 2021, 2:51 pm

Well boys I bought the dip, got it at \$0.23 and it just keeps pumping regardless of the crash. This is a solid project, I smell a 100x.

Hitachi - September 7, 2021, 3:54 pm

Took a quick look and the project looks pretty solid at first glance, might throw in some money and slowly DCA in after I've read a bit more about it. Note though that there will be huge unlocks coming:

Cooldudex - September 7, 2021, 7:14 pm

I think the unlocks are fine and normal. That is as long as they actually stick to that map, though. We recently saw issues with certain projects and the same situation. It's held pretty steady as well after the market pullback which is promising. The project seems pretty solid after looking around a bit. I'm going to throw some money in and see where it goes in the next month or so

Posted this last month here. Got in @ .09 cents / .10 cents

This is going to go parabolic even after the first release of locked coins.

I remember seeing your thread and looked over it. I almost bought then but I was in deep on a bunch of other stuff. RIP

Cooldudex - September 7, 2021, 7:35 pm

(Sep 7, 2021 07:33 PM)Lowkey Wrote: [\[CITE\]](#) Anything under 30 cents IN MY OPINION is still early. Yeah I bought some today. I'm pretty confident I can get at least a 2x at this entry so we'll see. The next week could be interesting

Cooldudex - September 7, 2021, 7:50 pm

(Sep 7, 2021 07:46 PM)Lowkey Wrote: [\[CITE\]](#) Hopefully you got in around \$0.25
Yeah I got in at \$0.27

Cooldudex - September 7, 2021, 7:55 pm

(Sep 7, 2021 07:52 PM)Lowkey Wrote: [\[CITE\]](#) Good to hear brother. Hopefully your hands are made of diamonds

100% I'll ride it all the way to zero lol. I'm not all in or anything I threw in around \$1.5k. I can lose it ?

Xoid - September 7, 2021, 9:24 pm

Looks like no one told rose about today's BTC correction, just keeps pumping ?

Recon12345 - September 8, 2021, 12:58 am

I got in at 0.11 and 0.12 still holding ever since @ staking in binance.

Why / Where do you see the value in this token?

Back in June, when it was still \$0.05, I was discussing ROSE with a friend of mine who actually has medical data being secured on the Oasis Network already, and while I liked it, I ultimately decided that I didn't see a reason why it could be valued at \$5 or \$2 or even \$1.

Spoiler [\(Click to View\)](#)

I still agree with this, it does something unique and it solves a problem, which, broadly speaking, are two huge boxes to tick for me when determining if I like a coin. But I still don't see what drives its value. I like the tech, but why is this a smart investment?

My thought process throwing some yolo money into this was exactly that. The tech is unique and has a use case. That puts it over so many other projects already. I wouldn't be in it for the long term(not saying it won't move up in price) but rather a 1-2-3 month period. Add on that the market cap is rather low with some room to grow still(in my opinion), I don't see an issue putting in some money short term.

Or it could tank too. Lol.
