Thread: [Can anyone suggest what to do with Tor Browser?](#)

FriendlyAnonymousUser - September 11, 2021, 12:30 am

So I got the app installed, but I don't know what to look at since it just seems like a regular browser with more security. I get the basic idea of it but I was hoping to see interesting things aside from just the basic things people talk about with it. Can anyone suggest what to do?

Malwhere? - September 11, 2021, 1:58 am

Look up the Tor Wiki and have fun.

Lyrlei - September 11, 2021, 6:22 am

Looking for Tor sites always reminds me of trying to look for sites on Yahoo Geocities.

?itcoin - September 11, 2021, 7:31 am

Tor is fun but you need to know how to search on it else it's just a regular browser. Just be careful with markets on there because a lot of stuff is just pure scams.

bk randy - September 11, 2021, 8:13 am

You seem very inexperienced. I would research more above t how to use it.

Visit Dark.fail for links.

Find the Dread forum url for onion discussion

Omniscient - September 11, 2021, 10:16 am

Tor is just a shield for your privacy. Your origin IP is hidden from the websites you visit in the browser. So let's say you're doing something that privacy is important, that's when you'll use Tor. For some it's a privacy habit, others it's when they watch porn, and then you have some using it to be criminals. You use it how you want.

SIM-3387369 - September 11, 2021, 10:23 am

The only real use I've gotten out of Tor is the marketplaces. Perhaps you could check those out.

I-I - September 11, 2021, 1:01 pm

There's really not much to see, probably shouldn't be using it if you have to ask.

It helps you to unlock the blocked sites that your country currently blocks.

eviking - September 11, 2021, 8:21 pm

Tbh, I have no idea. I have tor browser but Im 110% retarded when it comes to the dark web. Like I just dont know of any sites to visit that are cool I guess. Ive been to The Hidden Wiki but thats about far as i know lol.

I wish I knew more about it and knew of some legit cool websites on the darkweb.

According to the deep-web sites page, Only a 4% of information is visible to the search engines like Google so I'd expect there's plenty to see [Link](#)

spongebob - September 12, 2021, 8:57 am

Most of the sites on tor are scams. Visit dark.fail to find legit ones. But don't do something illegal.

LM143 - September 12, 2021, 11:00 am

Also want to add on that TOR allows your to enter .onion sites which is deep web sites.

I--I - September 12, 2021, 12:27 pm

That's referring to websites that don't get crawled by googles bots. You don't need TOR to actually access them because they aren't on the actual onion network. So no, there's not lots to see. I'll tell you what you can find there. Imageboards that are basically nothing but gore and childporn, carder/db leak websites, fake hitman advertisements ran by the FBI, banned book library. and stores to buy drugs.

95% of the internet isn't only on TOR lol. "Dark Web" doesn't always mean "The Onion Router" and has many definitions.

Not knowing these basic things about TOR is exactly why he shouldn't be using it. Does he know he was added to a government list the second he downloaded the TOR Project? Is he aware the FBI owns a large amount of TOR nodes these days? Does he understand the dangers of running something like Javascript while browsing? Is he even bothering to use an OS like Tails to better hide his tracks and his actual machine?

This is the first video you watch before even thinking about touching TOR:

Yes I should've been more specific between the "Criminal " Darkweb and the 96% Deep Web, So how would anyone access any websites that don't get crawled by googles bots ? Would I need a another browser and are these websites .com or .net or whatever or do they have their own domain ? Thanks

They have normal domains or are just IPs, people setup their sites to be crawled by google and other search engines because they want exposure. Those who use servers for other things than public use, don't do this. Their site is still accessible in some ways through a domain or IP, but it would most likely have a login panel or just deny your connection for not being on the whitelist.

Let us say you set up an Apache server on your computer right now and run it and do nothing else. Congrats, you're apart of the "dark web" by that definition.

Advice, don't use him :) Find another browser ?

Palestine - September 22, 2021, 4:40 am

Be very careful about what you do on there i too also recommend you do some more research before getting your hands dirty. You don't want to catch a virus or something worse... also search this forum and you can post/find it in the proper section. You'll have much more luck there.

Good luck though! Be safe
