Thread: [\[#1\] NT-Miner - Silent Native XMR Miner - C++/ASM - INSANE PROFIT \\$\\$\\$\\$\\$\\$\\$](#)

RCE - September 16, 2021, 6:48 am

Price per Build: 99.99\$

How to buy a build?

1- Add me in telegram http://t.me/RCE_1

2- Send me this info:-

Pool

Wallet Address/User

Password (If it exists)

FAQ :-

Spoiler ([Click to View](#))

Q: Which payment method do you accept?

A: BTC and ETH only.

Q: I want to use a third-party crypter. Are there any optimal settings to use?

A: Due to the deep integration of several algorithms, Nt-Miner will most likely be incompatible with third-party crypters.

Q: My Build Got some detection, are you able to refud/recrypt my build?

A: Yes we can do that for an independent fee (20\$).

Q: Do you keep any logs?

A: We do not keep any logs.

Q: Is there a chance to not get banned by XYZ pool?

A: You cannot really avoid bans but you can avoid losing your client machines by using a proxy.

Q: What is DMP Algorithm?

A: It's a custom-made algorithm that stands for distributed mining processes, which means the mining rates will be distributed into a couple of processes, so terminating one of the mining processes will not stop the mining process, and it will be recovered via watchdog.

Q: Is it possible to get my own instances killed by the Nt-Seek Botkiller?

A: Nt-Seek touches everything except its processes.

Q: What is the benefit of using Nt-Seek?

A: Nt-Seek can help you to clean and protect the client machine from malware and other CPU-consuming instances (such as other miners). More CPU cycles automatically result in better mining results. Additionally, you can make sure that the client machine only hosts one miner instance and uses its CPU power to make calculations only for you.

TOS :

- All sales are final
- You are not allowed to scan the files in distributed scanners like virustotal.
- You are not allowed to crack/leak the builds.
- We reserve the right to change TOS anytime.

Detection Rate:

(Sep 16, 2021 10:13 AM)RCE Wrote: [\[CITE\]](#) maldev0 transfer the src before years and I'm the owner of IonMiner and this is my thread

<https://hackforums.net/showthread.php?tid=6014084>

And i own the full source code of ionminer

Your all claims are false and you must apologize and delete your comment.

deleted but there isn't a difference in features or anything new from back then to now, nothing new on the table but oh well it's ur product. GLWS

There is a new feature which is a polymorphic engine and DMP algorithm with a better recovery for the processes, if you dont mind,ask jocker to recover my thread in the forum too.
