Thread: [DOC/XLS Exploit Builder - Source Code](#)

Alpha Software - September 29, 2021, 7:50 am

Hello,

I am selling a source code of a DOC/XLS exploit builder created by myself.

The features are as followed:

- DOC Exploit Builder
- XLS Exploit Builder
- Unique Stub Generator
- FUD
- Bypass Gmail + other mail.

It works similar to the Office Exploit Builder I have on sale here, here's a video.

<https://streamable.com/qx0tan>

You will receive:

- Full ownership of the project, you are allowed to resell
- Full source code (VB.NET)

The price is \$300.

If you want to add features it is \$50 per extra feature, just ask and I will add it for you.

If you want regular refund updates included I can do that, please mention it in your message.

I will only be selling 1 copy of this source code.

Alpha Software - September 30, 2021, 7:52 am

Just updated the USG on this source to improve the uniqueness of each build.

Alpha Software - October 1, 2021, 10:32 am

Lowered the price to \$400. You can contact me on Telegram:

@alphaminer9

Alpha Software - October 3, 2021, 11:44 am

Now only asking \$300 for this source. Extra features will be extra.

Alpha Software - October 5, 2021, 11:54 am

You can resell the source or sell it in builds you will have complete ownership. I can even add a licensing system.

Alpha Software - October 7, 2021, 10:06 am

If you need a licensing system added I will happily do that for free, you'll be ready to sell right away.

Compulsive - October 7, 2021, 1:32 pm

Hey man I still need my refund. Cannot contact you on any platform it seems like besides the threads that you have.

Each time you contact you say it will be paid right now, and then it doesnt happen. I also purchased this product so it does.

Alpha Software - October 15, 2021, 1:04 pm

This source code is still available. Just done a fresh FUD stub.

Alpha Software - October 17, 2021, 10:49 am

Will be offering this source code for only \$250 today only. Contact me on telegram.

kikou981 - July 30, 2023, 10:24 am

Good morning sir.

Tell me that the administration panel / malware control can be done for example on Windows 7?

Does your malware infect all versions of Windows? if not which ones please?

also Linux and Macintosh?

Can shelle code be piped to TOR nodes to avoid being traced???

Editable source code?

the shop is still open reassure me!??

Where are the customer reviews?

thank you for your reply
