Thread: [Python DDOS Script - Run On Windows OS - What Is Server Config?](#)

SIM-4815581 - October 3, 2021, 3:49 am

I found three python scripts on github for DDos attack.

1.
[SlowLoris](#)
2.
[Hulk](#)
3.
[Hammer](#)

I have windows os and installed python 2 & 3 on it.

Server Config is like this : 3 gig ram - 2 core cpu - windows server 2008

When i run multiple SlowLoris on this server nothing happens on target.
Also nothing happens on cpu & ram.

When i run 2 Hulk on this server nothing happens on target.
cpu = 100%

When i run 2 Hammer on this server nothing happens on target.
cpu = 100%

Which script is better?

What is the best server config for break a target?

Would you please introduce me a good script for DDos Attack?

Due to confusion between legitimate load testing services and illegal DDoS attack services, we decided to disallow this. So we will no longer allow any content related to SST services, DDoS for hire, or DDoS attacking of websites.

We recommend you take the time to read the [HF Help Documents](#) section. The answer to your questions should be contained in there.
