Thread: [KCC/ERC-20 network?](#)

Tech?NO - October 3, 2021, 11:08 am

Hello! I am about to transfer 81\$ from my KuCoin account to my USDC wallet at Coinbase, but I am asked which network to send the money over. The ERC20 fee is 25\$ whereas the KCC network fee is as less as 10-20 cents. I am however worried to go for the second option as I might loose my money. Can you please advise whether it's safe or not to use the KCC network option?

Thanks!

shreder - October 3, 2021, 11:10 am

You will lose your money as coinbase states specifically to use ETH network on the deposit.

Tech?NO - October 3, 2021, 11:15 am

Yeah, just figured it out. But thanks, appreciate it!

So, there is pretty much no way to withdraw my money without paying \$20-30 in fees, right?

Woah, that's some decent article, will definitely go through it later. Thank you so much!

So, the method above will work for BTC/ETH only, right?

Guide says that it might not work for ERC-20 tokens (Ethereum network). If you try this, let us know what was the outcome.
