Thread: [Any Browser that have Built-VPN or Proxy Extension on Multiple Browser windows](#)

Transporter007 - October 4, 2021, 6:47 am

Hey guys,

Is there any Browser that have Built-VPN or Proxy Extension on Multiple windows or instance on Browser ? Actually I want to open multiple windows or instance on Browser and each window can be with different countries IP.

Edit: Anyone who know how to use Multiple IP on different instance or windows on Browser ?

Regards.

False King - October 4, 2021, 6:56 am

One that I do know of is Opera. They have a VPN built-in in their browser. Opera is actually quite a decent browser.

Dopamine - October 4, 2021, 6:59 am

You should try Opera. It will probably fit with what you're looking for.

Kaiba Corp - October 4, 2021, 7:01 am

Depends on what you'd be using it for.

ToR might be your best bet.

I use Brave and if vpn might be needed expressvpn has a good extension for this one.

I am not really sure if Opera has this option when you open multiple browser and it will give you different ip from different countries.

Beherit - October 4, 2021, 7:08 am

Like the posts above me said, use Opera. I personally use Brave for all my needs.

It's been a few years since I experimented with it, but from what I remember, I never liked the performance, a bit slow.

Everyone seems to use Brave but wouldn't Tor help with this too?

With ToR you compromise speed especially if in countries that are... Let's say less technologically advanced. Anonymity is assured but may take half an hour to load Google.

Yeah I suppose.

Good point there lol

Tor is mainly useful for accessing the Onion Network. If you just want to access the clearnet in a masked way, using Tor for this is like using a power tool to wipe your ass.

Gets the job done. Whether you enjoyed how it was done or not I guess

I thought everybody attached a toilet roll to their drill?

But true point.

You can always use browser extensions for that.

False King - October 4, 2021, 8:23 am

I do enjoy the fact that the user named Tor is not recommending Tor like some of the others.

Opera have only USA 1 IP . As I said on main POST that only anyone Browser can option multiple instance and on each instance it can be able to show different IP wheather in-built VPN or Proxy or any extension.

Furthermore, I want to have a browser like if I open 5 instances than all 5 instances have different IP's like : USA, Canada, Europe and so on...

Tor - October 4, 2021, 11:06 am

Felt like I had to do it.

Blazin - October 4, 2021, 11:40 am

Opera as others have said has a built in VPN.

Transporter007 - October 4, 2021, 12:10 pm

That have only 1 instance and only 1 IP.

Can - October 4, 2021, 12:19 pm

You can try opera it has a built in VPN

blackrose_x0x0 - October 4, 2021, 12:22 pm

As others have said, Opera might be your best bet for a browser based VPN.

Opera's VPN includes 4 servers and is based in Norway.

o3Fo - October 4, 2021, 12:24 pm

Red Browser, It has an optional tor node and security selection features.

Prettykitty - October 4, 2021, 12:26 pm

I think there are add ons on firefox that allow seperate instances and you can use some vpn addons on each, especially if you have different versions of firefox. It would work if you use private windows and non private windows. E.g firefox dev edition and regular with vpn or proxy addons.

Kaiba Corp - October 4, 2021, 1:07 pm

Is it for your own anonymity though?

Or do you want to run some bots?

I'd suggest a VM on a Cloud for the later depending on your pc too.

Transporter007 - October 5, 2021, 8:53 am

Then I'd strongly suggest Brave Browser with express or ghost extension.

Attach gemini or Binance wallet and you are anonymous while browsing plus you get a small amount back to power your VPN subscription.

No one understand the question till yet. I meant on main post. I want to open multiple windows on 1 browser which can be any . And on multiple windows IP should be different. Got my point now ?

Then I think Firefox is optimal for this plus iMacros and proxy list. But it's been a while since I used something like that

How does iMacros work ?

Kaiba Corp - October 6, 2021, 1:49 pm

(Oct 6, 2021 11:45 AM)Transporter007 Wrote: [\[CITE\]](#) How does iMacros work ?

It's a Firefox extension that through a script will be able to run you through the proxy and click what needs clicking. You should be able to multithread 50 instances computer permitting of course.

Transporter007 - October 7, 2021, 8:32 am

iMacros is very difficult so any other easy extension ?

Kaiba Corp - October 7, 2021, 9:11 am

Not that I personally know of will run whiteout switching off the others.

The script advantage is that you can code it or pay someone to code it to do exactly what you want.

The available services on the internet are more business oriented so... You're best bet I think would be either hire someone to make a script or python programme.

have a look if anyone in the marketplace here is already selling what you need.

Don't get discouraged though what you're looking for may exist I've just personally never came across it

No one is selling like that on marketplace.

VNT - February 22, 2022, 6:23 pm

I like using opera for free VPN, or I use the foxy proxy extension with private proxy when I want more anonymity.
