Hey buddy, i hope you are doing well.

Thanks to bring this in our notice but we checked & found that servers are working fine with port forwarding. however please check if the services are running for the port which you are opening & also your system firewall/ anti virus is not blocking it.

It would be good if you can connect to our OSVPN Discord server for quick support.

I created an account today.

It seems to me that you only offer OpenVPN, no L2TP/IPsec, no IKEv2 and above all no WireGuard.

Will you be introducing WireGuard, soon?

hey buddy right now we are providing our own application to connect windows endpoints however openvpn used to work with cross platforms. we will be launching the osvnp application for cross platform soon.

Bookreader1971 - March 17, 2022, 3:50 pm

It would be easiest if the WireGuard conf file with the private and the public key could simply be downloaded from the customer area.

To be honest, I would have preferred this a lot rather than having to download additional software from a VPN provider (I use several VPNs).

Well buddy its depends as per solution, in our OSVPN software you don't need to download any key or config. you just need to download the software, use your OSVPN account IT & connect with any listed server. that's all you need to do which seem quite easy & quick, apart from this you can use port forwarding from same application as well which not offered by most of providers so as said its depends as per the solution.
