Meaning a coin that has potential to skyrocket to the 100s which is dirt cheap right now.

Everyone is looking for them

They're very hard to find

Gossel - October 7, 2021, 7:51 am

Makiswap, HTR and Kadena.

Makiswap offers the same options and futures as PanCakeSwap, like Spot trading, Farming, Staking, Coinburn and Lottery. its bases on Huobi Chain and will be Multichain very soon. The fees on there HECO (huobi) chain are way lower than Binance Chain.

HTR is a top Layer 1 project with a prospected halving this January.

Kadena is a new project similar to Solana and ChainLink.

Take a look at <https://fndz.io>

defi upcoming copy trading platform with a massive team behind it
thank me later

Reef finance MAYBE. They basically want to become a multichain with fees lower than huobi/binance. Also they plan on being the gateway to defi, basically bringing all defi crypto together and from the reef platform you can stake/buy etc, making it UI friendly for newbies.

IF and a big "IF" they deliver all this then it has all the chances to go to 100\$+ and it's only 2 cents right now? (Got in at 4 so i am at a loss but planing on hodling this one in staking until the next bull run i guess)

Roadmap >
