Thread: [Dns and vpn for rat?](#)

SIM-2778735 - October 10, 2021, 4:06 pm

Hi, So i recently bought Bitrat + CrazyRDP vps for education purpose only.

So I guess I will need to get a DNS and an VPN to open port, or can I do all that on my CrazyRDP pannel?

any recommendation for a good DNS / VPN open port?

Thanks you

Stellacy - October 11, 2021, 1:29 am

For dns you could use duckdns or freenom dns. Both are free and I haven't had problems with them. And for vpn you could get Cryptic vpn or Mullvad vpn. The problem with Mullvad vpn is that the port you open is completely random so you have no control on what port gets open.

Eladictococy - October 12, 2021, 10:41 am

nVPN is another vpn you can use for open port.

Thanks for the information.

PS: I also needed it.

lol

you can use noip for make host dns
and use staticvpnip or [censored]

Don't use NoIP, they give logs away.
