Thread: [Puppeteer Automation Help Desk - Javascript](#)

xPower - October 10, 2021, 5:45 pm

This thread will be used as a help desk for automating browser actions via Puppeteer. The Puppeteer package makes it extremely simple to automate web actions via a browser, considering you have a basic understanding of javascript (or python).

I have created several automated browser scripts with puppeteer over the past 2 years. As a result, I have gained an in-depth understanding of the library and can assist you all as needed.

Basic Puppeteer

<https://www.npmjs.com/package/puppeteer>

Puppeteer Stealth (Automate undetected)

<https://www.npmjs.com/package/puppeteer-extra-plugin-stealth>

You can utilize this to automate pretty much anything browser related such as repeating a process, collecting data, filling a form, etc.

The possibilities are really endless and this thread is here to help you all!
