Thread: [image signature problems](#)

SIM-4230503 - October 13, 2021, 2:31 am

Hello

I wanted to put an image in the signature and after putting the code i get this error:

Signature image doesn't exist.

When i preview the signature, it works perfect. Tried to put the image url from different domains but still nothing. Any help would be appreciated.

Thanks

Upon save, external image links are validated, it must fail upon some check.

What is the image URL?

It sounds like an issue with the image, or its metadata.

Can you post the image URL here?

Might help.
