Kadena mainly of it being similar to SOL and that it is able to handle up to 8,000 tps with latencies below 100.

FrostedCake. Meme shit coin.

Reef Finance. Huge GAMBLE IMO but they're trying to achieve a multichain with lower fees than the big sharks out there (Binance, Huobi, KUCoin etc) and DeFi in mind. It's a pretty ambitious project which could either hit big or fall hard.

Glitch Protocol. Its decentralized blockchain has a minimum of 3,000 TPS that increases based on network growth. Great reward mechanism for its community that ensures lower transaction fees for everyone. Staking, bridging, and swapping features. Also its mainnet is set to release end of year 2021 (pretty soon) and IMHO its token price is quite undervalued. Marketcap's at \$49M, Total Supply is 88M and Circulating Supply is currently 79M. If there is a next SOL, this could be it.

AGAIN, all of it is a big GAMBLE and always trade at your own risk. None of this is financial advice.

You're very welcome. I've come across them just recently and I'm pretty surprised there is no discussion around them especially GLCH.

That was a GREAT BUY honestly. I came across it around that price but could never see that increase coming. Huge win, congrats.

Currently, hodling GRT.

I also have ICP, but it doesn't seem to be moving :/

iNviZ - October 13, 2021, 4:25 pm

I have a huge list but BTC is my main, I always like to throw some money in small bags on certain coins. ETC was one that blew my mind after spending 50.00 to buy in 2 years ago. I'm no genius in crypto at all but a little never hurts if you can afford and if I double my money on coins I know nothing about... easy BTC buy.

Redwall - October 13, 2021, 6:33 pm

Just trying to get my BTC up and hold

Itachi Uchiha - October 13, 2021, 6:46 pm
