Thread: [Inceptor - Template-Driven AV/EDR Evasion Framework](#)

DI?E - October 21, 2021, 12:45 pm

Modern Penetration testing and Red Teaming often requires to bypass common AV/EDR appliances in order to execute code on a target. With time, defenses are becoming more complex and inherently more difficult to bypass consistently.

Inceptor is a tool which can help to automate a great part of this process, hopefully requiring no further effort.
