Seems ConMarketCap updated some supply numbers for SHIB and its now in freefall:

<https://shibinformers.com/2021/11/04/supply-changes-of-shib-a-symptom-of-a-bigger-problem/>

Current: 0.00004910

Down 22% in the last 24 hours.

Investing in shitcoins is a huge risk. Shouldn't be a surprise to anyone at this point, to be honest.
Also, time in the market beats timing the market.

Please let me know what the next one is when it happens, I wanna buy it on time :(

Just buy in when it falls back to .000006, sell during next major jump. Saw so many idiots buying in at the peak, and I tried telling them now is not a good time to buy.

Also shib made some random dude like 8 billion dollars at the peak, and I bet he's cashed out a decent 10m or so. He invested 8k usd last yr. He can and most likely will tank the market too

Omniscient - November 4, 2021, 10:48 pm

This is a fools game. Some of you just like gambling.

Agphyso - November 5, 2021, 3:09 am

Like Omni said it's a fool's game.

But can't lie, some people literally became Shiba Inu millionaires and now they can take that money and put it into so many other businesses, ventures.

Some people aped \$500 into it at the right time and made sooo much money.
