Thread: [Use own Payload for MSF](#)

**PingByte1337** - November 9, 2021, 7:19 am

Hey Guys,

how can i load a own payload (created with msfvenom) in Metasploit? Thank you

Looks like you can use msfvenom right from inside msfconsole, and go from there with it

Hey, thank you and great tutorial but it is the same as only msfvenom.

I would like to know how to integrate with the exploit such as exploit/windows/smb/psexec the payload created.

I'm not sure what you're asking. You can call msfvenom from inside msfconsole, and set it as the payload for the exploit you want to use. Could you clarify what you're trying to do?

What did you do with msfvenom, what exploit are you using?
