Thread: [Xenos Loader - Advanced Loader | Native | Fully undetected | Secure](#)

justvmexit - November 9, 2021, 9:58 am

XenosLoader

Xenos is an advanced loader written in JavaScript and C++.

Agent features Native executable written in C++ with CURL and [nlohmann/json](#) (widely used libraries)

Agent is very bare bone and hard to detect heuristically.

~490kb uncompressed.

String encryption for unicode and ascii.

Communication is encrypted.

Unetected on 0/26 anti-viruses as of 23-09-2021 (antiscan.me)

Light-weight and fast task execution.

Seperate encryption of all streamed images.

Supports both HTTP and HTTPS.

Standalone client with no additional files needed.

Silent and undetected persistence.

Panel features Builder on the website.

Easy management

Light-weight with modern frameworks

Easy task execution Open website on zombie

Execute command on zombie

Stream and execute executable

General information about zombies (IP, OS, Infected on, Last ping, etc.)

Screenshots

I am willing to give show code to trusted members and anyone in general for showcase

Pricing

Source-code: 800\$

~490kb uncompressed.Those are not "features". Those are things to be avoided in malware and, especially, loaders.

I know it may be but in this scenario what is the issue with CURL or nlohmann.

We are targeting Windows systems with a little more than 500kb's of space.

You could say that if I was targeting IoT which I am not.

Edit:

In any scenario, I could just switch to a more light-weight HTTP library if I need to.
I can easily make the size a lot smaller.

Because no reason to keep a service up if it's not being used and money isn't going in.

int main() - November 23, 2021, 2:20 pm

I mean it's gotten me pretty far.

It's simply because he is trying to defame my project, no?
