I havent watched it I just clicked forward a few times to see what you did and only did it on movie1 but I noticed few things

```
Code for (i = 0; i < 1; i++)
    passwordArray[i] = CharacterArray[0].ToString();
why don't you jsut do
passwordArray[0] = CharacterArray[0].ToString();
```

also this while (arraycharacter[i] != "-1") i++

you only set arraycharacter[0] to something different than -1 but I think you change that later in part 2 or something :P

Your bruteforcing your input? This makes no sense, try bruteforcing hashes (SHA1,256,512,MD5).

For now it just bruteforces some password u write in Textbox1
Change it to a hash or whatever u want and have fun ?

This is the source code with some changes etc

Thanks for this, I might make an MD5 database and bruteforce hash's into my database, then I can decrypt any hash upto the letters I've bruteforced :p
