Thread: [Decentraland \(MANA\)](#)

CBHF - November 12, 2021, 6:55 pm

Recently just picked up a bag after learning more about the project and the deeper I get, the cooler some of their features are. I also recently saw that Meta (FB) as well as Microsoft are forming a partnership for their teams to collaborate possibly for the Metaverse?? Just trying to diversify my bag in the NFT/ Metaverse space while it is still early on.

What's your guys opinions on this coin?

I will drop some links below so you can DYOR:

Site: [Decentraland.org](https://decentraland.org)

WP: <https://decentraland.org/whitepaper.pdf>

Link to their current marketplace: <https://market.decentraland.org/>

LMK what you think!

noname12345 - November 12, 2021, 7:06 pm

IT JUST pumped way too much already.

funtela - November 12, 2021, 7:48 pm

Just picked up a few. Let's see what happens.

stacking - November 12, 2021, 9:02 pm

I believe sandbox have better ROI

Check its demand

<https://opensea.io/collection/sandbox?tab=activity>

There nft and land are selling in every minute

SA777OSHI - November 12, 2021, 9:17 pm

I had a decent bag back in February, then sold most of it and held a small position, still decent profits.

I like the project, it reminds me of the Xbox 360 Avatars, I always wanted Microsoft to integrate some type of app to the Xbox 360 dashboard where you could play with your Xbox 360 Avatar on a "Xbox City" with mini games like racing or whatever all around the city, or simply chill with your online friends avatars, but that was just a dream, never happened, the avatars launched back in 2009 I believe, and they did create some games for your avatars like the "Doritos Crash Course" or "1 vs 100", pretty cool games I liked them, but they never made a city or open world game for the avatars, that would be amazing, this project is basically what I wanted Microsoft to do back in the Xbox 360 era, that's why I invested on it, and MANA has done good progress, If they keep doing a good job this will definitely be one of the greatest metaverse projects, Microsoft should buy this project instead of starting from scratch, even though Microsoft has the potential to create something better it could be very expensive for them, hiring new professionals that have an idea about this,

planning, etc...., and that still doesn't guarantee it will be better than MANA, that's why I am bullish on MANA, because as I mentioned before they have done good progress, and even companies like Microsoft are not guaranteed to create something better than this. But yeah still MS have a good chance, we will see but MANA is a great investment, looks like projects like this will be the future of gaming at least.

(Nov 12, 2021 08:06 PM)noname12345 Wrote: [\[CITE\]](#) IT JUST pumped way too much already. I plan on holding my bag for quite awhile, so I am not too worried. If you're skeptical about buying it, wait for a dip and just throw in what you can afford to lose. If they follow through with what they say they are trying to do, this coin will sky rocket.

That would be absolutely insane if Microsoft looked into purchasing it instead of starting from scratch. I see more and more people getting into crypto everyday, we are in early to the whole Metaverse/NFT space so let's see how this goes lol?

Blockonome - November 13, 2021, 7:02 am

I played the actual game with a \$1100 gaming laptop and it was lagging hardcore, which was the whole reason I decided not to go into this one and invest in Enjin instead.

Obviously I wish I had invested in MANA back then, now. However, I am not too sure this will fly much more, than it is now.

Sensitive - November 13, 2021, 7:56 am

Take a look at \$MIST or \$NAKA, this is more about gaming.

SHELBIZ - November 14, 2021, 3:48 pm

MANA was cheap in January 2021, some friends bought around 16 cents so good x25 but now I think good entry is about 2\$ 2,5\$ max

funtela - November 19, 2021, 6:11 pm

Currently over \$4. Wonder how much higher it will go.

Rahul007rhp - November 20, 2021, 2:03 am

Scared to jump on a fast moving train !

Its moving fast im waiting for it to dump and ill hop on.
People riding MANA are lucky.

I support SAND.

funtela - November 24, 2021, 9:15 am

MANA is at \$5+ now. 30% profit for me so far.

Bastille - November 24, 2021, 10:56 am

Heard a lot about MANA so I bought 100 of them few days ago.

Just tried the game, damn even with my RTX 2080 it's lagging ? I'm not a trading guy, I'll hold them for probably 2-3 years. Not sure that this group will release their own game, but pretty sure that a bigger company will buy them to use their skills/knowledge for their own game.

<https://hackforums.net/showthread.php?tid=6143609>

I spread the word March 8th when it was about 50 cents. I made a small fortune on it from October. Sold already but glad to see it pumping more.
