Thread: [Earn BTC in background every second with your Mobile Phone](#)

Jinu - November 18, 2021, 1:52 am

Hello guys,

Today I come up with a new method to earn BTC. This is pretty much simple. You do not need any big work. Everything happens in the background.

Requirements:

1. Android Mobile or PC (I recommend Android even old phones)

How to Setup?

Method-1 No Investment

Spoiler ([Click to View](#))1. Go here: [Click here!](#)

2. Click the Google Play Icon. Download and Install Crypto Tab Browser Lite.

3. Register with your Google/Facebook account.

4. Click Activate. You'll get 1000 H/s. And every 2 hours activate it.

5. It will mine you the BTC.

Note: It won't consume any battery.

Hack Tips: If you use the same account on the other device you will get 2000 H/S

If you have old phones, you can do multiple devices with your same account to multiply the Hash rate.

Method-2 Little Investment

Spoiler ([Click to View](#))

1. Go here: [Click here!](#)

2. Download and Install Crypto Tab Browser Pro (Around \$2-\$3)

3. Register with your Google/Facebook account.

4. Click Activate. You will get 1500 H/s. And every 3 hours you have to activate it.

Note: It won't consume any battery.

Hack Tips: If you use the same account on the other device you will get 1500+1500=3000 H/S

If you have old phones, you can do multiple devices with your same account to multiply the Hash

rate.

And if you don't have multiple devices, you can buy boosts for a very less price.

Check it out: [Here](#)

Method-3 Mining on PC

Spoiler ([Click to View](#))

Mining on PC is one of the powerful ways to. While you are doing your work, you can mine in the background by just running or browsing in the browser.

1. Go here: [Click here!](#)
2. Download and Install Crypto Tab Browser
3. Register with your Google/Facebook account.
4. Click on the extension icon on the top right.

5. It will start mining for you.

Hack tips: If you have RDP or old Android phones, log in with the same account and activate it. Multiple devices mine at super speed and give you more \$.

My Referral Link: [Click Here! Thank you.](#)

I tried this and every time I click the start mining button the browser instantly closes every time. Unfortunate

In which device did you try? Android or PC or Emulators? In Emulators, it won't work.

Ah, it was an emulator thanks for the insight. I will try another method now

Earlier it was worked. But people made multiple instances and spammed their hash rate. So now they have blocked it. If you find any method to run Crypto Tab on Emulator, please let me know. That way we can earn a lot.

Found a new trick to double the hash rate. If you really want to make use of it, reply to this thread.

Absolutely agreed. Instead of this nonsense and using your browser to mine, you could opt for something like the Brave browser instead and turn on ads to earn BAT rewards (if you trust them, that is), and simply swap your BAT at the end of the line to BTC. Still slow money, but now you're not wasting your electricity mining bitcoin for a couple of dollars.

Mining bitcoin with your home computer in a browser is about the silliest thing you can do. You're probably spending more money on your electricity than you're making with the miner in your browser. Seriously, this is a guide on how to lose money, harm nature and essentially give OP more rewards because a couple of kids think they'll get rich on mom and dad's electric bill using a referral code that profits the OP more than the mining will ever do.

Whilst the OP claims that mining BTC is not going to harm your electric bill, rest assured that ALL computational tasks on ALL devices WORLDWIDE costs electricity, also known as energy.

See the title and my recommendation first. I recommend using mobile phones. Without reading the thread, without practice anything, don't come to any judgment.

You are perspective of mining is using PC.

If you think a computer takes a lot of electricity, you can do that with mobile phones to mine. That's server dependent. It not even drain your battery as some apps do.

I think charging your mobile phone won't consume that much electricity as multiple GPUs do in original mining.

With referrals and an increased number of devices, you can earn a lot. That's the only work here.

And if you use boost features, you can increase the hash rates up to 25x.

Without trying and without persistence in any work, everything will look dumb and slow.

I am using my old mobile phones and free RDPs to mine. That didn't consume any big electricity bill.

And I didn't mention anywhere that this is the only method to earn. There are a lot of methods to earn. This is one of them. If you want you can add it else ignore it with your other methods. Along with Brave browser you can run this browser too to earn more.

And I didn't mention anywhere without electricity you can use device.

Are you able to transfer to an external wallet?

Jinu - November 26, 2021, 10:31 pm

Yes. You can.

1. Enter your BTC address.
2. Enter the number of BTC you want to withdraw from the Crypto tab wallet.
3. Click Withdraw.
