Thread: [Need twitter mass mention bot + custom scraper\(\\$500\)](#)

trump20244 - November 23, 2021, 9:47 am

Hey, I'm in need of a custom twitter bot to mass mention people and also to scrape usernames without a proxy. Wiling to pay \$500 for this to be done and I can pay first via PayPal. Need this done as quick as possible, if interested send me an inbox here, I'd prefer here.

[contract=tid]Start Contract[/contract] Also, I want to be able to use this bot without twitter api or api keys or anything like that. If it has to be browser based like selenium, that's fine

Twitter limits their api usage. Not sure what "mass" means to you but it'll be limited to about 200.

200 requests per 15-minute window per each authenticated user

User limit: 300 successful requests per 3-hour window

I have a verified account which is able to able to mention 7500 in an hour and 180,000 mentions in one day, the limits are different and I know someone who the other day who did it themselves, they just don't want to share their bot.

I'm able to scrape unlimited data and export to csv but to post I'm not sure the limits. I've only seen the limits I've stated earlier. Might be a higher limit though.

If no one was able to complete this i will be able to do it.. To avoid all twitter bot triggers that can happend you have to use special browser for automation which not so many people know about.. I can do it in 2-3 days :)

I am new here but i had a lot of experience with automation and you can pay after i create a bot and show you how it works via video :)

Using pure selenium wont help it since you will be eventually triggering bot detection :)
