Thread: [Beginner-Intermediate Programming Lessons - 15 per hour - DISCOUNTS AVAILABLE!](#)

ThatDevAaron - November 25, 2021, 4:40 am

Welcome to my Beginner-Intermediate Programming Lessons Service. I will be providing a much needed service for people who want to get into software development & web development.

I ONLY PROVIDE JAVA PROGRAMMING LESSONS, NO OTHER LANGUAGES.

How much do I charge?

I charge 15 GBP /per hour, which would consist of the client, and I, joining a call via discord, telegram, etc, we would then continue on to have lessons based on a 'timetable' I'd have developed for your specific needs, after we discussed what you wanted to get into primarily, etc.

What will I learn?

Here are some example lessons you may want to take on, as you progress your skillset, you are able to request lessons to learn more specific things you are interested in: Basic Syntax.

Threading.

Networking.

Programming without Memory Leaks.

'Malware' Development (Completely Educational).

And MUCH, MUCH more.

(View some of my projects to see what else I've made: <https://github.com/aaron-akhtar>)

PM ME or CONVO - we'll exchange discord/tg and talk.
