Thread: [CUSTOM PC GAMING BUILD](#)

Motown_Temp - November 29, 2021, 8:38 pm

Hi I'm looking to do two separate builds for gaming .

Budget 1 Build : \$1000

Budget 2 Build : \$1500

Before you ask , these are for two separate individuals & peripherals are separate from the build.

Build 1 , I'm looking to have it be able to play games at a consistent frame rate. Games like Fortnite call of duty etc

Build 2 , I'm looking to have it be able to play games at a high rate , Battlefield , CoD , Racing Sim , the pc would also need to be able to edit videos

Breeze26509 - November 30, 2021, 8:21 pm

Build 1: (Let's face it, you're not getting a good graphics card for \$300, otherwise it would be a pretty solid build for \$1k)

[PCPartPicker Part List](#)

CPU: [AMD Ryzen 5 5600G 3.9 GHz 6-Core Processor](#) (\$284.77 @ Amazon)

Motherboard: [Asus TUF GAMING B550-PLUS ATX AM4 Motherboard](#) (\$149.99 @ Amazon)

Memory: [Crucial Ballistix 16 GB \(2 x 8 GB\) DDR4-3600 CL16 Memory](#) (\$74.40 @ Amazon)

Storage: [Western Digital SN750 1 TB M.2-2280 NVME Solid State Drive](#) (\$109.99 @ Western Digital)

Case: [NZXT H510 ATX Mid Tower Case](#) (\$74.98 @ Amazon)

Power Supply: [EVGA G5 650 W 80+ Gold Certified Fully Modular ATX Power Supply](#) (\$71.83 @ Amazon)

Total: \$765.96

Prices include shipping, taxes, and discounts when available

For the \$1000 build, even if it's 1100 or 1200 that's fine as I don't see a graphics card.

The 5600G comes with integrated graphics.

Here's the thing, if you spend \$500 on a graphics card now, you're getting a pretty low end card.

For \$1200, your best bet is to go with a prebuilt that has a Ryzen 5 5600x and something like a 6600XT if you can find one.

Something like this for example:

<https://www.ibuypower.com/Store/Gaming-RDY-SLHRR204>

It has a 3600 CPU, but that's still plenty for what you need.
