Thread: [Do my computing 'theory' assignments - NO CODING, Industry Knowledge, Long-term](#)

ilsrb - December 5, 2021, 12:45 am

Looking for someone to do my 'theory' computing mini-assignments which need to be ~200 words and require zero coding. 20+ each year.

Some of the questions (I've shortened down the questions for multiple reasons):

Agile in the workplace - explain an agile methodology

Ethics, how to conduct yourself in the workplace - how do you act when speaking to managers compared to your team etc

why is looking for threats and vulnerabilities to IT systems on an ongoing basis a good idea

project deliverables - tell me the benefits for dev and customers

common types of testing that are applied to identify vulnerabilities in software

Harvard referencing is needed, all you have to do is use your previous industry knowledge to answer the questions or just look them up online and reference them, this is a non-exam course and I have 2 years left.. so basically if you can do it, I'll quite happily pay you to do them for the next 2 years.

Will pay for each one delivered once I checked it over.
