Thread: [Bitpay shows wrong amount??](#)

TheLocker - December 8, 2021, 1:12 am

So, I had bitpay on iOS for a while and it works fine. But recently I noticed total value of my crypto is showing almost 15 times more of what I actually have. The amount is right but the value is 15 times more in USD.

Is this is glitch only or can I benefit from it somehow? Restart phone doesn't brings it in normal conditions.

Did you try to withdraw to check? To me it a glitch probably you should update your app again.

It's latest version. I also think it's a glitch. Cause when I try to withdraw, I can only withdraw the amount, not the value. I mean if i have 10000000 shib, I can only withdraw that amount. Not \$360x15.

I just asked maybe any of you guys ever encountered this and might have used the glitch to actually get the extra funds... ??
