Thread: [How are the griefing clients doing these days?](#)

!!!JAVA!!! - December 14, 2021, 10:58 pm

Hey it has been a very long time since I was last active on the griefing section when there was a sub-section and many probably wont recognize me lol.

Straight to the point -
How has mc been since like five years ago?

I remember that there use to be plenty of custom clients available, but now it looks quite scarce I don't even see any clients really around. I am curious, guessing that the server sided anti-cheat has gotten alot better since then potentially that's why there aren't as many clients available these days.

jcole - December 14, 2021, 11:04 pm

I never did grief on Minecraft personally, but was not really that into the game like my brothers and friends were. I believe there are still some good clients to be used, but it requires a little more digging than some other games like GTA5 which is still very popular with mods. You can check out this website, and do some research on some of the clients like "Wurst" for example and see if you happen to like anything you see.

Thank you for your quick reply, It's little bit more obscure I see. It has been quite some time since I was last on here.

Gonna checkout the site.

V O X - December 18, 2021, 6:38 pm

Griefing on mc has become less of a thing. It's mainly moved towards anarchy servers like 2b2t. And with paid clients, there's not much free clients trustworthy anymore. It's both unfortunate and fortunate to see plugins like worldguard and rollback working.

Coolleojkrock - December 19, 2021, 7:13 pm

Do you have names or links to some paid clients?

Join the 2b2t discord. Ask in there, they'll tell you

yakabuff - December 26, 2021, 1:01 am

5 years ago, clients were mostly pvp/minigame related but now, clients are more geared towards anarchy servers with features like autocrystal, entity speed and baritone. free clients are even more sus and they're probably backdoored

Chris ?ansen - December 26, 2021, 11:30 am

Hop back on Mumble or Telegram or something. We all miss you very much! <3

parity - December 26, 2021, 12:25 pm

People are still at it, just not here. I know a few people who take it pretty seriously still. Me and a few other people will fuck around on unintentionally open vanilla servers we find on shodan every so often during snapshots.

Where is the grieving client community at nowadays? I've found a few discord servers for anarchy clients but that's about it

There's The Client Guys, invite disc: zYVb5Zn

Dunno about anywhere else on disc. There aren't really any communities like how this place was back in the day of showcasing clients and other hijinks. For instance TCG is just a lounge talking about estrogen pills most of the time nowadays... I see more minecraft cheat dev stuff in totally unrelated servers than I do in there when I do poke my head in to check.

I see it just died over on this forum. Glad to hear other are still at it, and ill hop on mumble sometime this week ill be sure to make it.

and thank you to everyone that has responded to this thread I appreciate u.

Glad to be updated on the trends.

Actual question... did the majority of us REALLY turn out to be trans? Several of us have wondered this over the last few years based on what we've seen and heard and it seems to be a trend. I'd really like a survey to be taken and interviews to be conducted to collect further data and I'm dead ass serious...

Must be a thing to do with cheating o_o

CS:GO cheating community is mostly trans after awhile too

dang lol. i remember i bought the .tp exploit off him

Jequaviuslyn - January 22, 2022, 8:21 am

anarchy (1.12.2): future, konas, gamesense, oyvey, wurst+3, momentum, cosmos, seppuku, lambda, kami blue, phobos 1.3.1 (earthhack)

hypixel (1.8.9) hack clients: novoline, astolfo, rise, tenacity, raven b+, vape, itami, koid
newer releases (1.17-1.18) clients: impact, meteor, wurst, aristois

//note: some of these clients may be ratted, please make sure to check the free clients intensively in case of viruses. make sure to download clean clients especially for wurst+3, phobos, itami, and koid. They are often ratted and distributed.

GenericSkid - January 23, 2022, 2:34 pm

I don't really follow MC dev or 2B2T drama aside from what I see in the tangentially related server's I'm in (And like I said, I see more MC stuff happen outside of actual MC focused servers). But I do second being wary specifically of Wurst+.

Personally I just roll with small separate fabric mods.

- Dozens of xray mods to pick from
- Dozens of fullbrights
- Most other small cheats can be hand made in about an hour

Crazy shit is locked down nowadays anyways so there's not much to really do. Plus public servers are mostly mini-games. The only thing able to be hit hard are private servers you can find by port scanning IP ranges of MC hosting providers. But that's really sinking low to hit those because most of the time its small personal servers among a few friends with no backups.

SIM 420 - January 24, 2022, 10:09 am

Vape & Falcun, the rest are pretty much gone!
