Thread: [5900X TEMPS](#)

Refleckz - December 24, 2021, 12:40 am

Hey just got a 5900x cpu using a hyper 212 evo for cooling and under gaming load im hitting 80- 86 degrees Celsius is that normal?

?OMEGA? - December 24, 2021, 7:00 am

I just built a pc yesterday with a 5800x and i'm having a prebuilt water cooler and i hit the same temps.

I would expect those temps considering you're using a shitty cooler with a 12 core CPU lol.

Consider upgrading to something like the Noctua U14S if your case allows for it.

Which cooler did you get?

Can't remember its a year or two i bought it. Pretty sure as programmargorp told me i fucked up adding the cooler paste properly. Because its only 1 of the cores that hits those temps lmao

soulm8 - December 28, 2021, 8:18 am

Put some noctua on it with quality thermal paste and see results. Thats not normal temperature for any kind of cpu. Not even for full load.

soulm8 - June 24, 2022, 6:37 am

5950x

Noctua paste and BeQuiet Dark Rock pro 4 i never went above 74c

Completely normal. Only way I was able to get it down was with an AIO. IIRC these chips are known for running a bit on the warm side, and are built to do it safely.

Yes it is. Ryzen runs hot. Very hot. OP your temps are fine. Nearly everyone with a 5800X+ sit at your temps.
