Thread: [I have wifi access to someones wifi.. What can I do?](#)

Monkey123456789 - December 24, 2021, 6:18 am

What all can i do if I can get on someones wifi? I heard that if I know their old gmail password and i log in from their wifi itll allow me to reset the password.. Is this true? Either way what else can I do if I can access their wifi

Thanks -- Will also pay someone to guide me through this \$\$\$

the_x - December 24, 2021, 7:39 pm

what kinda skill u got?

you can sniff traffic and see what you got.
maybe run a mitm
backdoor their router

its how determined you are

Silkroad - December 24, 2021, 8:12 pm

DNS Hijacking would probably the most "malicious" thing you could do while having access to someone's network/router.

Quote:Domain Name Server (DNS) hijacking, also named DNS redirection, is a type of DNS attack in which DNS queries are incorrectly resolved in order to unexpectedly redirect users to malicious sites.

How does a DNS get hijacked?

Router DNS Hijack: This DNS hijacking method involves hackers using a vulnerable DNS router (a hardware device used by domain service providers to link their domain names to equivalent IP addresses) to launch a DNS attack by overriding and reconfiguring the router's DNS settings.

So for example you make a facebook phishing page hosted on your vps and reroute their dns so when they go on facebook.com it sends them to your page, you can get all their info.

Or you can redirect them to a malicious website to download a RAT or use a xss attack on their browser.

Monkey123456789 - December 25, 2021, 1:18 pm

I have no skill on this. I would gladly pay someone to help me.

the_x - December 29, 2021, 10:46 pm

I can't PM you, what exactly you trying to accomplish?

Cooper Field - December 31, 2021, 9:37 am

there are many mitm tools available . Use them to re-route their gmail/facebook traffic to a clone website of yours.

can you send me some tool names to re-route wifi traffic?

Monkey123456789 - January 4, 2022, 12:53 pm

Bump.. Thanks everyone - Please DM me or reply here - I will pay

And how do we redirect them to a malicious website to download a RAT or use a xss attack on their browser.?

Using mitm tools. Pm me , I will help you with it. But I expect a green apple in return

Arctic5874 - January 14, 2022, 5:33 pm

you can probs earn some money by running bandwidth selling tools like honeygain,trafficmonitizer,earnapp,packetstream,peer2profit,iproypawns,etc

Sitrep - January 15, 2022, 1:51 am

You could press "Forget" on the wifi, and let them be!

Marcus Lauren - January 15, 2022, 6:38 pm

You can steal their data. Lookup for BurpSuite or BetterCap , those should work.

BugHunt3r101 - March 31, 2022, 1:24 pm

Research MITM attacks, EvilPortal, TwinAttack. Tools like wifi pineapple facilitates all this. Look it up!

Yea don't know how I missed that. My bad lol

JimmyJammzz - March 6, 2024, 1:43 pm

I would like the same help as this dude and I am willing to do whatever foot work I need to. But, I've spent countless hours pouring myself over everything form trying to teach myself python and HTML, learning Linux, reading all kinds of tutorials.

The issue I have is I lack direction. I feel like I am trying to learn math bur i signed up for the calculus class before I get to take algebra.

Information overload is one of the biggest problems in hacking. When you've learned to ask the right questions, I'll be here.
