Thread: [cs to exe using comand prompt](#)

altana - December 25, 2021, 3:03 pm

Hi, after searching to compile c# program whitout visual studio I found :

```
"C:\Windows\Microsoft.NET\Framework\v4.0.30319\csc.exe somefile.cs"
```

And it worked well, but after I found :

```
"C:\Windows\Microsoft.NET\Framework\v4.0.30319\msbuild "C:\Projects\MyProject.csproj"  
/p:Configuration=Debug;DeployOnBuild=True;PackageAsSingleFile=False;  
outdir=C:\Projects\MyProjects\Publish\"
```

But it didn't worked, so I wanted to know if by any chance there is a possibility to combine and optain that :

```
"C:\Windows\Microsoft.NET\Framework\v4.0.30319\csc.exe somefile.cs /p:Configuration=Debug;"
```

Also I would like to add the parameter "output type" as a "Windows Application" wich is why I searched all of that for.

Here you go this is the parameter documentation for the c compiler

<https://www.oreilly.com/library/view/net-framework-essentials/0596001657/apds06.html>

scriptsandapps - February 9, 2022, 8:46 pm

Basic example

```
C:\Windows\Microsoft.NET\Framework64\v4.0.30319\csc.exe /out:black-rocky.exe /target:winexe  
program.cs form1.cs Form1.Designer.cs
```

basic example:

github.com/ScriptsAndApps/Blackscreen.exe

you should also look to add .resources files

docs.microsoft.com/en-us/dotnet/core/extensions/create-resource-files
