Thread: [Need to create b2b ecommerce dropshipping store](#)

Yungversace - January 7, 2022, 8:43 am

I'm look for a website which can faciliatate the functions :

Enabling Dropshipping for business owners: where an influencer or business owner can locally fulfill their orders with our service

- 1)where users can create account
- 2)scroll through different products
- 3)add them to their dropshipping profile
- 4)Supply a address and company name
- 5) whenever their's a order from them it shows in order with shipping and orignating address(or just company name as dropshipping)
- 6) users can recharge their accounts
- 7)Daily orders selection menu should be very simple and effective for lot of orders
- 8) the main website should also show product's marketing material

Onboarding Sellers who can sell their products to be dropshipped ; so the sellers can apply and submit their catalog and we can approve their product.

So once they recieve a order, they accept it and ship it for them with their brand name
[contract=tid]Start Contract[/contract]
