Thread: [Best way to crawl hidden info from a website](#)

f21daec86f - January 12, 2022, 7:53 am

Hi guys,

I want to get some users' hidden info from a website(website is developed in 2001, there must be some vulnerabilities in it) , does the hackers usually use "Credential-Stuffing" to login the account, and crawl their info?

I would like to find someone to help me(not for free). However some guys will send msgs to me, and ask for a prepayment for the job. But how could I know whether they will just take the prepayment and go away. Therefore I set a question about getting several accounts' info, if someone can answer them correctly, he will get the prepayment. If someone is interested in and send msg to me.

You cannot offer payment in this section. You must use the Hack Forums Marketplace. See below and read the welcome PM you receive when signing up.
