Thread: [Code a react bot for Discord](#)

IOI_IOI - January 13, 2022, 2:37 pm

Looking for someone to build a bot that DM's the user that reacts on an emoji of a Server specified. Basically a selfbot and can import tokens maybe. Also able to send embeds.

So it's going to be dming users from a server that we don't have perms on it just scans who ever clicks the react button of a server and auto dms them.
