I can't pitch QNT that well myself, you'd be better off researching it, however...

Quant is an incredibly strong project with close to no marketing. We don't see QNT bringing in new customers/users, we don't hear about what's being built on QNT, but this is by design. QNT focuses on partnerships with large institutions and governments. QNT see regulation as a certainty, and their safety first approach is designed to ensure that they stay in the good graces of regulators when that giant pile of shit inevitably hits the fan. They're building something impressive, and they're taking their time to ensure that nobody can take it away from them when it's ready.

You pitched it well enough for me to be interested in learning more. It's a smart approach when you can afford to do it. Definitely going to be doing some research, just like I'm sure many others are after this buy.

The CEO used to work in the federal reserve system. That alone made me invest in it. That guy is heavily involved in money and finance if he used to sit there.

He has also worked at the bank of england which is the english central bank.
