Thread: [Looking for experienced Python programmer - OBJ DECT, YOLOv5](#)

winodino - January 22, 2022, 12:10 pm

Good afternoon. I'm in need of a project to be updated. The project is well documented, sound structure, and is clean.

The project is an object detection aimbot for FPS games. Last updated 5 months ago.

I need help with:
updating project to work with 1440p resolutions.

accurate screen targeting. (may have to do with issue #1) as it does not point to the target.

Intergrate inception driver instead of using windows API for better security.
[@github/oblitum/Interception](#)

work with windows 11, possibly already does, cannot verify.

I am able to hop on a call to discuss the scope.

Some requirements may apply.

You cannot have a 16 series NVIDIA GPU, unless you update PyTorch within the project, or find a fix.

Be able to run Halo Infinite for testing.

The project will be provided with serious inquiries. Looking for a flat rate estimate; will pay with crypto/paypal/venmo/cash app/ACH transfer.

Future features will be implemented. This will be an ongoing relationship.

Regards,
winodino
