"A 2020 research paper, published by the National Library of Medicine, indicates that NeoCoV is closer to MERS-CoV than SARS-CoV. The scientists also warned that NeoCoV may appear "in human-related infection."

According to the bombshell preprint, published on Wednesday on the bioRxiv portal, NeoCoV "can efficiently use some types of bat Angiotensin-converting enzyme 2 (ACE2) and, less favorably, human ACE2 for entry."

SARS-CoV-2 uses ACE2 to enter the human body, too, which means that the infection mechanism of the two strains, despite their differences, might be similar."

Good news, it's currently only spreading in bats, and in order to really infect a person, it still needs to mutate.

Covid going to kill me ... damm

Omniscient - January 29, 2022, 12:24 am

Can't help but feel this is all a test and that a real virus that's very deadly is gonna be intentionally released just like Covid. When you raise the death rate to maybe 5-10%, the world will change drastically. It will make Covid seem like the good times.

And more deadlier the Virus, deadlier will be their push for more mass vaccinations.

When Bill Gates said they could limit the world population significantly by vaccination that should have given everyone pause. Exactly what is he doing in Africa? Why are people like Elon Musk trying to move to a dead planet like Mars, wasting money instead of fixing Earth? A lot of these points all stray to "The Great Reset" or whatever people want to call the end of the 20th Century and into the 21st one.

As a side note, this is a weird article and yet very relevant on your point.

I honestly believe covid was a test trial to see how the world would react. China has that in their pocket. Nothing stopping them from releasing something way deadlier.

buoy69 - January 31, 2022, 6:40 am

Just in time for the winter olympics. I believe it was likely that covid 19 was spreading during the 2019 world military games in wuhan, with it being during the first cases of covid 19 and the athletes experiencing covid like symptoms. What better place to cause a global pandemic than an event where athletes all over the world will go back to their home countries, spreading any viruses they have. Though im not sure how likely it is for a virus to spread during the olympics, i could see it happening.
