Thread: [Automate a website and bypass a simple captcha with multiple accounts](#)

SIM-611976 - January 29, 2022, 12:53 pm

Hey guys,

I need someone to make a bot / webapp which can automate this task on a website:

- Be able to click a specific button with all accounts of a list (user+pw) on the website (be able to scrape the button related to a comment with a certain keyword in it)
- Also needs to be able to pass the captcha with the moving puzzle where you move a piece of a puzzle with a simple slider
(it looks like one of the easiest captchas)

As always paying good let me know if you can do it!

DM me some more info please.

Luffy-_- - February 1, 2022, 12:02 pm

Can you please Dm the website i'm interested in giving it a try for learning purpose

skjibbu - March 3, 2022, 7:07 am

Can I get it for recaptcha and hcaptcha

Bypass method

This seems captcha of Binance. Why can't we go through API if its Binance? Or if its something else, kindly send me details in PM.

too much copium - *March 4, 2022, 12:08 am*

as Sapple mentioned, using the API would be far easier and less expensive, but if thats not an option i've already done this in python with a feature selection algorithm for a university project

Would have to adapt it to meet the rest of your needs, but thats the easier part
