There's an endless list of Amazon tools that you can use on AWS. The most famous one is EC2 instances where you can create VPS (Virtual Private Servers) for hosting, process automation and even cloud mining (Check my thread here: <https://hackforums.net/showthread.php?tid=6191346>). If you know what you're doing, it should be pretty easy to make money from these \$1k accounts.

He's selling credits to AWS which stands for Amazon Web Services. Simple told it's a datacenter

which sells access to various different services such as Virtual Private Server, computing resources and so on. Yes it's owned by Amazon, which also have a Marketplace that is reselling everyday items. Credits and "Gift Cards" are nothing the same, as they're targeted to different marketplaces.

AWS is basically the nerds playground and Amazon Marketplace is basically the household marketplace.

Sounds interesting, do you accept MM?

Also what exactly is the source of the funds? so 1 day I won't wake up to a huge minus in my account

Payment first, sorry. because there's some costs involved with the process. However I'm offering 2 x discounted review copies so you can order yours for only \$100.

As mentioned in the thread, it's completely whitehat and 100% safe. You can verify the source of the funds after I've upgraded your account / you purchase a new upgraded account.

That's unfortunate but I will pass, if you will change your mind and can accept MM I will gladly buy it asap as I use AWS pretty often.

Anyway GLWS!
