Thread: [Free Religious Exemptions For COVID Vaccination Requirements](#)

Handsome - January 31, 2022, 3:38 pm

I am giving away a 20 page PDF Religious exemption file for the COVID vaccine.

Note: It references Orthodox Christian saints and doctrines, however, you do not need to be Orthodox to use this. In the United States, your employer cannot ask you to prove your religion, nor do you have to agree with the leader of your religious institution.

I can't attach the PDF because HF only allows .txt files unless you're a vendor, which I am not. So here's the link, if you use it and agree that it is safe, please vouch in the thread.

<https://mega.nz/file/ffpCAJqR#u6cBNVI9tvblc93Um1wQBv2PPaR3lO13021211QiEL0>

Edit: Lots of provax dorks in here. Doesn't matter, I'm not taking this down. You're only boosting this thread. Hope everyone who needs this exemption gets it! ?

SIM-5049184 - January 31, 2022, 3:54 pm

Dude just get poked with the fucking needle for christ sake I havent grown a third arm or been mind controlled yet

If its ACTUALLY for your religion, thats fine, if you're using it as an out then just stop

Handsome - January 31, 2022, 5:32 pm

Nobody should be forced to get an experimental drug with no long term testing and dangerous side effects for a disease that they'll most likely not even know they have. You may fellate government boots, but many don't.

If I have to use my religious exemption to help others who don't want it, so be it.

EDIT: There's several reasons people don't want the vaccine. From fear of deportation, to fear of government experiments (Tuskegee Study), and general hesitancy over long term side effects.

Vibe - January 31, 2022, 5:35 pm

Depending on state Employers don't have to accept it if it'll cause an undue hardship on other employees

Something that would not stand up in court as it is a federally protected class. Even our military accepts religious exemptions, Sihks are allowed their turbans and beards.

This is 100% airtight.

They could fire you if it causes undue hardship...

Section 12: Religious Discrimination

“ B. Undue Hardship

An employer can refuse to provide a reasonable accommodation if it would pose an undue hardship. The Supreme Court has defined “undue hardship” for purposes of Title VII as imposing “more than a de minimis cost” on the operation of the employer’s business.[242] The concept of “more than de minimis cost” is discussed below in sub-section 2. Although the employer’s showing of undue hardship under Title VII is easier than under the ADA, the burden of persuasion is still on the employer.[243] If an employee’s proposed accommodation would pose an undue hardship, the employer should explore alternative accommodations.”

An experimental drug that has been in development since 2002, are you a bit of a numbskull? It's okay, most Christian people are. COVID is not a new virus, the strain we are seeing, yes, but otherwise no, the tech is nothing new. An emergency authorization states that a regulation is coming, but in times of desperate need, such as a pandemic can be deployed without needing such things.

So lets breakdown all the ingredients of the covid vaccine.

Messenger ribonucleic acid (mRNA) - A harmless piece of protein that allows your body to cause an immune response so you can deal with the virus if you are to get it.

Lipids - If you've ever taken a science class that wasn't led by a religious official you might know that a lipid is a fat and in this case allows for the protein to enter cells.

Salt, sugar, acid stabilizers, and acid - Literally just keeps the vaccine from going bad while frozen.

Now in typical retard fashion im assuming you'll rebuttle this with some hard facts or enlightenment from god, but since your hardware store job in alabama probably doesn't need you to get the poke im unsurprised.

Here just some facts for your squared ass people thatll do anything your politicians tell you to do and not based off science.

Moderna vaccine skipped animal testing all together, only tested on 45 people, 15 high dose, 15 medium dose, 15 low dose

Low dose - 1 person got so sick they got hospitalized 6%

Medium dose -

High dose - 3 people got so sick they got hospitalized 20%

And they filter subjects to be only the healthiest people, can't be pregnant, can't be overweight and never smoked for vaped, no respiratory problems in your family, can't have diabetes, arthritis, ages 18-55 and 2 doses given 28 days apart. More than half had side effects. One person got a low dose and got hives and was withdrawn from the study.

Fauci put 500 million into the vaccine and owns half the patent.

FDA gets 50% of its budget from vaccine companies

CDC has an 11.5 billion budget and 4.9 billion of it is buying, selling and distributing vaccine, it is a vaccine company that owns 57 vaccine patents

NIH owns 50% of moderna vaccine

Regulatory agencies are vaccine companies

dr.william Thomson CDC senior scientist 3 years ago came out and said they were ordered to fake all science on autism, there is a history of falsifying vaccine science.

Flu shot has been around for 90 yrs and still is only 35% effective (claimed by CDC), Cochrane collaboration said no it is only 1% effective because 100 people need to get the vaccine to prevent 1 case of flu. 0 evidence flu shot prevent hospitalization or death. If you get the flu shot you are 6x more likely to transmit the flu.

More polio is caused by vaccine than the virus itself, four African countries have reported new cases of polio linked to the oral vaccine.

AstraZeneca test trials on monkeys concluded that the moneys where transmitting the virus,

Andrew polard, Oxford virologist, no vaccine has been tested against a placebo to compare against unvaccinated test subjects

Did a recent Israeli study conclude natural immunity produced by recovery from a COVID-19 infection is thirteen times better than that produced by the shots now being promoted in the U.S.

Oh sorry I forgot to mention my current schooling in biology on the premed track and computer science double major.

One credential gives me the ability to say you're wrong.

The other one taught me how to type it faster.

lol how are you going to say its wrong jus cause of your degree when these are all literally facts you can look them up goof.

Spyware - January 31, 2022, 11:00 pm

The Fact of the matter is this:

If a Bakery (Company) can make the choice to refuse to make a transgender cake, then the Company can make the choice to fire everyone who is not Vaccinated.

You can have it one way, not both. As it was ruled in court that the Bakery has the right to make that choice, they also have the right to require that all their employees be vaccinated. If they refuse, they can mark Undue Hardship and fire you. No further action needed.

So find your ways to try and get around this. Simple fact is, this is the way this is going now. Just like polio and all the other viruses that have a vaccine it will be required and enforced for Public sector and most likely public sector.

Truth - January 31, 2022, 11:36 pm

why is it in a zip folder and not just a pdf viewer online

Sapple - February 1, 2022, 12:04 am

(Feb 1, 2022 12:36 AM)Truth Wrote: [\[CITE\]](#) why is it in a zip folder and not just a pdf viewer online +1

Same question from me as well.

YUNG - February 1, 2022, 9:52 am

Never let anyone bully you into a decision you don't feel comfortable on. In the end it's your choice to choose. Don't conform because majority of the people get it. Since when did we become a society where everybody has to be on the same page?

Handsome - February 1, 2022, 11:13 am

The question I would like to know is when did hackers start listening to the government on what they should and shouldn't do? I expected more attitudes toward government oversight like Omni, not so much the boot fellating I've been seeing.

(Feb 1, 2022 12:36 AM)Truth Wrote: [\[CITE\]](#) why is it in a zip folder and not just a pdf viewer online
Let me explain,

I know what neither of these things are.

(Feb 1, 2022 01:04 AM)Sapple Wrote: [\[CITE\]](#) +1

See the explanation above.

(Feb 1, 2022 12:36 AM)Truth Wrote: [\[CITE\]](#) why is it in a zip folder and not just a pdf viewer online
I know I said idk what neither thing is, but looking at the file I uploaded, it shouldn't be in a zip file, I uploaded a simple PDF. The zip file is mega's thing. It's the only website I've used in the past and I

never even thought about a PDF viewer, mainly because I don't know what that is.
