Thread: [Bumptool.cc sends bytes without performing bumps](#)

Herion - February 3, 2022, 3:40 pm

I recently noticed that my bytes were going down quickly. I found out that bytes are being sent to Charger continuously without any Stanley bumps being performed.

I have about 440 pages that look like this, every 15-20 pages you see a few Stanley bumps. The rest is to Charger.

I asked Charger if it would be possible to refund those bytes but he refused as it was my fault for not finding out earlier. It's my bad that your system is broken I guess. I know, that I am late to figure it out but I am using an autobumper because I don't want to pay attention to it.

In the end he refunded me 5k bytes, he owes me a whole bunch more but that's fine. I just want everyone using the Bumptool.cc to be aware about this, maybe you should check your logs. I am not saying you shouldn't use the tool, I think it's awesome but you should be aware of this.

I hope I was the only one with this problem ?

Carrot - February 3, 2022, 3:42 pm

move your bytes into crypto coin game asap

Prawnster - February 3, 2022, 3:44 pm

Glad he refunded you some bytes at least.

Either way it's a weird thing for the service to do, hopefully it helps him spot whatever was wrong and this is fixed to prevent any problems for him or his customers again.

[(5)(5)] - February 4, 2022, 12:55 am

That's a really suspicious thing to have happen and then not want to refund for.

Charger - February 4, 2022, 1:31 am

????

Because I'm not refunding something that he allowed to snowball.

It's in beta. There's issues with it. It happened to one person for an unknown reason.

Obviously I'm looking into it. If you don't trust my shit then don't use my shit and let me know so I can add you to my ignore list and save us some time.

Horse - February 4, 2022, 3:28 am

no clue as well this was taking place thanks for letting every one know

Perplex - February 4, 2022, 3:59 am

Thats a fucking strange bug.

40 bytes = 1 hour x 24 = 960 a day

How you dont notice that is beyond me, but i guess smth about not paying attention

its strange that it is on clockwork every 15 minutes, except 1 time, where it solos 5 bytes at 2:17pm, after skipping the 2:15 double draw. very wierd behavior. I hope charger fixes. its a good idea, i would definately use myself if i had the need.

I agree that it's also partly my fault for letting it snowball. I just think its a dickmove keeping bytes that aren't actually yours, hence the community alert. I also think that I ain't the only one not checking his bytes or history daily. So hopefully I help someone, incase I am not the only one.

If it's in Beta and there is a bug on your end then why wouldn't you refund him every Byte? Are you saying each of those bumps occurred and get sent to Stanley for it?

Pikzul - February 6, 2022, 9:43 am

That is what the tool does, yeah. But it skimmed 5 more off each one it appears.

Charger - February 6, 2022, 12:04 pm

????? send me whatever wasn't sent and I'll send the bytes.

Semmenial - February 6, 2022, 12:19 pm

Damn that's fucked up!

Might consider restarting my Autobumper with no fee again to avoid this.

Charger - February 6, 2022, 12:19 pm

I've Refunded his bytes. He let this go on since 11-05-2021, 06:46 PM.

Herion - February 6, 2022, 1:25 pm

Seems like Omni's opinion made him change his mind and he refunded me all the bytes.

MaxiPads889 - February 7, 2022, 9:27 pm

Good. It's an absolute dick move to not refund this.

Now if he was actually out of pocket for the bytes -- I could understand being hesitant about refunding.

Charger - February 9, 2022, 2:12 am

(Feb 8, 2022 11:34 AM)-Scrub Wrote: [\[CITE\]](#) He only changed his mind because Omni commented lmao.

That is the sole reason I refunded them, correct.

Did you lose bytes? As-in, did your script screw up in a way that the bumps got paid for out of the vault beyond what the member put in?

Charger - February 9, 2022, 5:36 pm

I'm not entirely sure. It happened to do with HF limiting calls per second which causes a forced timing delay between the balance check, fee sent to me, and then the actual Stanley, and then the updated time stamp in the database once everyone is returned. I'm pretty sure there was a write delay on the time stamp with the cron job which threw the timing out.

The solution I'm working on is a vault-balance instead of on demand.
