Thread: [I used to 3d Print and Sell Discreet Vibrators](#)

neightworks. - February 5, 2022, 6:08 pm

This started as a thing to send my friend in India one since they're very taboo and live with parent until like death.. But then other friends wanted them so I kept making more. They're rechargeable and very strong. I wish I had found a way to hide the battery inside too, but not that important.

Spoiler [\(Click to View\)](#)

Lor?d - February 5, 2022, 6:13 pm

Can't say that's something I would have thought about, but why stop there? Sounds like a fairly profitable side gig to me, go big with it and make that money!

Honestly a pain in the ass and I'm not happy with the overall design, I would do it again if I found a way to fit it all in one.

I'm not sure of the power requirement needed for them but I'm sure you could fit one of those USB chargeable AA batteries in there?

5V is enough so 3.7v boosted, there are micro lipos that can output that and even they didn't fit.

What about using two CR2032 batteries in series? Surely you could fit two of those tiny watch batteries in there with a 3d printed base to hold them back to back to easily wire them in series. Would push out 6v.

I tried that, they wouldn't fit this sized sharpie, but there is a larger size where I think it would work.

Ah well I thought I was on to something there for sure. Maybe if those are too big you could try the smaller cell batteries like a SR621SW, but you'd need to run like 4 of them in series to achieve 5v. Might be able to use 2 or 3 and achieve usable results?

Bluffer - February 5, 2022, 6:50 pm

This is a very interesting idea. Feel like it's something if done properly you could work with other skilled HF members on and start up an actual company selling these.

Yuno - February 5, 2022, 6:54 pm

I think [Eran](#) could use one of these ?

juulstar - February 5, 2022, 7:07 pm

OP, pm me if you wanna give scaling this a shot. i can give my advice and help if i'm not busy.

the_bane - February 5, 2022, 11:34 pm

daam this looks really good

sex toys are banned in India but still has a huge grey market for it

L1l DuRk - February 6, 2022, 1:52 am

That a boss move there, and you can just find yourself someone to design something for you and pay them up. This is a huge business if you ask me and you need to treat it as such.

Eran - February 6, 2022, 3:10 am

This reminds me of a post on reddit I saw, there was someone 3d printing vibrators and made it look exactly like their boyfriend's d*ck. You would send them pics and they would make it that way XD

BaldCunt - February 6, 2022, 3:12 am

Is the sharpee also 3d printed?

This is a dope idea

the_bane - February 6, 2022, 5:50 am

btw how much did you sell it for? including the shipping cost

probably got sharpie ink up your own ass lmao

Actually it's because of the amazon giftcard thread you mongrel

r3byte - February 6, 2022, 1:16 pm

epic lol!

Creative yet enjoyable.

Grim - February 6, 2022, 2:15 pm

very good idea and materials are right there smart business play :)
