Thread: [evade av and private stub](#)

SIM-4924227 - February 6, 2022, 3:56 am

hello, how much is a private stub?

how encrypted stub work and evade av?

It depends on your Stub Native or .Net for native i use RunPe with few changes will give 5/20 runtime and Bypass WD

for .Net i use different technique give me 0/20-2/20 on runtime and OFC bypass WD

for Runpe first you lunch a process in suspended mode then you get image base address for x64 u can find from rdx + sizeof DWORD64 *2

then unmap the distination image and copy section headers for soruce image to distination image , copy section table , set dist image entry point to source image base address

resume thread

for my crypt it cost 499\$ for private handmade crypt no Builder only 1 build
