Thread: [\[\\$ Bonus\] For Each Shortcut Press Copy Column To The Right](#)

QU35T - February 10, 2022, 6:49 am

Okay so below you can find a screenshot and the code I have.

Basically, I have two workbooks

- What I have is workbook where I have macro with a shortcut (CTRL-SHIFT-M) this macro needs to open second workbook (data.xlsm) select and copy the first column, 01/15 (as you can see below), then I will need to do something manually with the copied content, and after I press the shortcut again, it will move onto another column -> to the right and again select and copy that column, and repeat.

Code Sub Copy_From_Another_Workbook()

,

' Copy_From_Another_Workbook Macro

,

' Keyboard Shortcut: Ctrl+Shift+M

,

Dim radky As Range

Set radky = Range("I04:I409")

souborData = "C:\Users\cza19785\Desktop\Data.xlsm"

souborReport = "C:\Users\cza19785\Desktop\konsolidovaný report_VBA.xlsm"

Workbooks.Open (souborData)

Set souborData = ActiveWorkbook

radky.Select.Copy

End Sub

What I have is this, I only select the column in the second workbook.

Somebody who can help me out I'll send some \$ onto your paypal, btc, shib, whatever. Thanks.
