Thread: [Can you transfer Rats from one program to another? With same ports](#)

GOTFAN789 - February 12, 2022, 4:19 pm

Would it be possible to transfer bots that are on specific systems into another client? For example, say you created a RAT on BitRat, and want to transfer to another program, with the same IP and ports, will the bot open?

Does it matter? You can transfer over but the port has to be different. Why do you need to use the same port? Unless your server doesn't allow for you to open a new one? Or you can't listen to a new one? Idk your issue either way, but no you can't listen to the same port on the same server... unless you had two different servers. Open up a new port and transfer or just stop listening on the other and listen onto to the updated RAT server.

at a time one app can only use 1 port.

2 apps can not use the same port.

Yes you can transfer just update your new client.exe on your bots

xVulnerable - February 16, 2022, 12:39 am

Applications cannot use the same port at the same time so if you have 2 different RAT software running at the same time you need to use a different port. To transfer your slaves you can use download and execute feature.
