Where I can learn hacking courses to protect my devices

Security Is 1776 - February 15, 2022, 7:49 pm

I've seen a few of them such as Udemy (warez disallowed) or Coursera for a pretty fair price. I actually am considering doing the same thing right now but am also weighting out the potential of my local community college. Don't sleep on the certificates that a state college has to offer, the price is usually pretty fair and some employers like to see these.

BugHunt3r101 - March 31, 2022, 12:57 pm

If you want to learn security is by learning how to hack the systems/devices/networks. I suggest learning networking (tcp/ip/http) then try websites like tryhackme, hackthebox, pentester labs, this will explain how to do the hack while you actually do it on a real system (a preconfigure lab that is). Very useful in learning how to protect yourself and at the same time how to hack! Better if you are inclined in IT, with basic understanding of computer science or at least Windows and common tools.

Can anyone suggest me witch course are best for learing ethical hacking?

SysAdmin - July 8, 2023, 3:12 am

The courses that are "cheap" and look like they'll teach you everything related to hacking usually fairly disappoint and only provide some mediocre metasploit knowledge along with a few other tools available on Kali.

I'd suggest getting a course that will get you started into Networking and Operating Systems if you're going into this field. You should start with the basics before jumping into something that has such a vast learning field as CyberSec and Hacking.

Ditto what SysAdmin said. Networking, OS knowledge, and some programming are important. For beginner training try The Cyber Mentor on YouTube and [Ethical Hacking Essentials](#) on CodeRed. There is also Linux Basics for Hackers and www.hackers-arise.com
